WEATHER OF CONCERN

Weather of Concern

- A Flash Flood Warning is in effect until 2115 hours for areas in Mono County

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

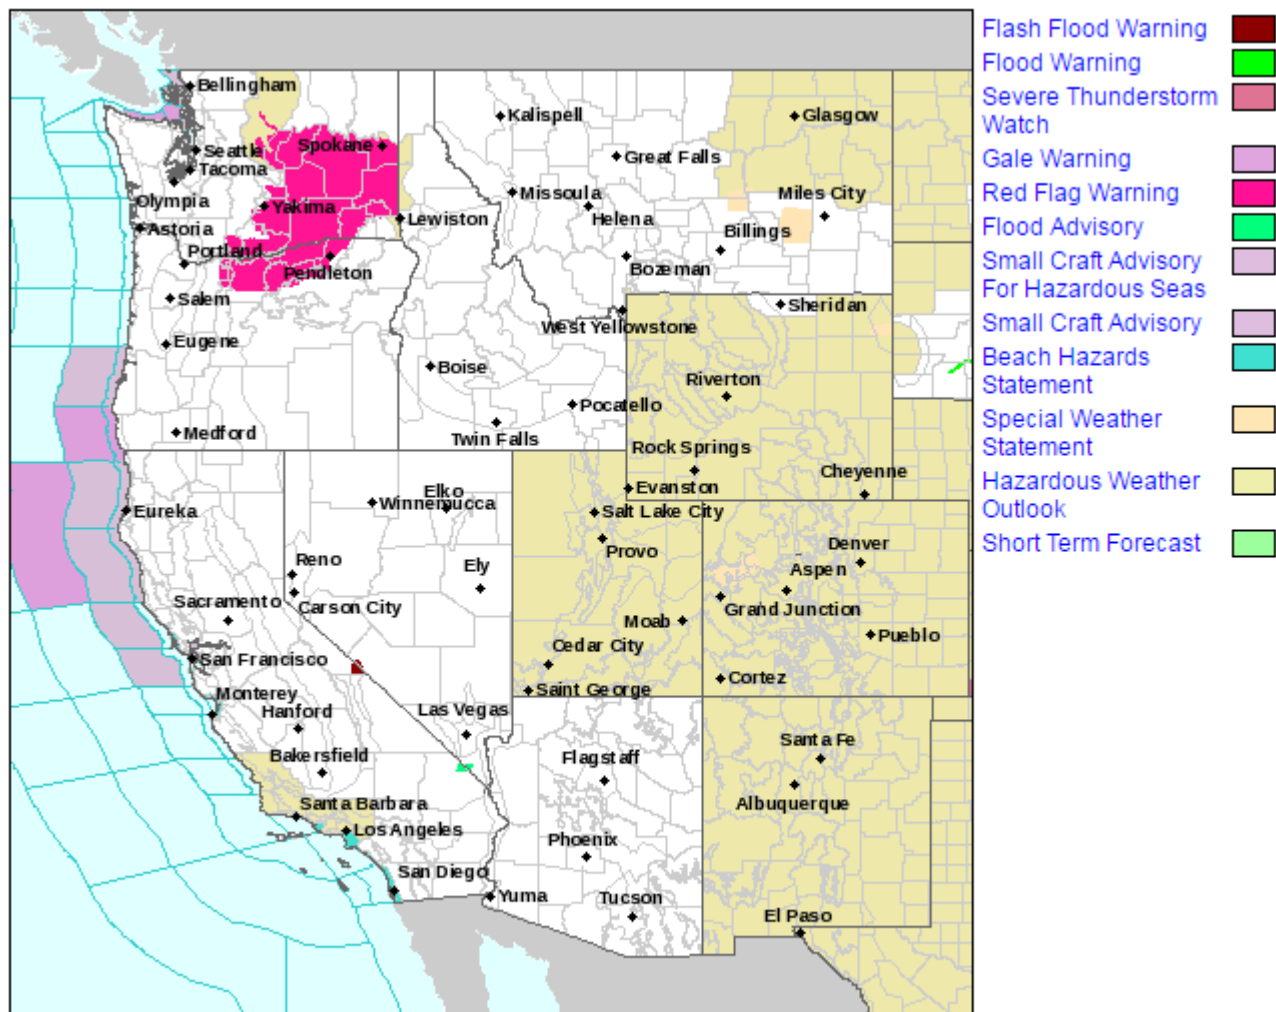

NORTHERN CALIFORNIA

A weak low pressure trough will be over Northern California region through Independence Day. Thunderstorms are expected just to the east and southeast of the region late today, and there is a slight chance that storms may form in or drift into our eastern areas from Lassen County southward. These storms would produce light rainfall, if they develop. The trough will also produce afternoon cumulus over the higher terrain throughout the region through July 4th, and isolated showers may develop. At this time thunderstorms are not expected elsewhere through July 4th. A gradual cooling trend will continue, and afternoon inland temperatures will be around 2-5 degrees above normal by the 4th. A deeper marine layer will keep coastal regions mild and stronger seas breeze winds will develop each afternoon. A summer diurnal wind pattern, downslope during nights and mornings and upslope during afternoons, will prevail in most inland areas, so seasonable wind speeds and directions are expected during the afternoon peak burning period each day. However, late on July 4th the trough will begin to deepen and higher elevation areas will begin to see southwest to west winds increase a bit. The trough will further deepen over Northern California Tuesday and produce more clouds and wind through next weekend. Winds east of the Cascade-Sierra Crest will be SW 10-20 mph with gusts 35-40 mph most afternoons from Tuesday through next weekend, but humidity will stay above 15% during this time. Temperatures will also drop to normal or slightly below normal midweek. There is a slight chance of showers or thunderstorms with this trough, mainly on Wednesday.

SOUTHERN CALIFORNIA

A weak trough overhead will produce south and southwesterly flow over the next few days which should scour most of the moisture aloft from the area. Yesterday, there were over 2,000 lightning strikes over the desert and a far fewer storms are expected today. Most of these will occur near the Nevada border. The rest of the area will see mostly sunny skies and seasonally warm temperatures. The marine layer is a bit deeper today, which will lead to slightly higher RH in the intermediate valleys, including eastern San Luis Obispo, Monterey and San Benito Counties. Due to easterly flow from thunderstorms, winds across the Antelope Valley and Kern County Mountains are now expected to remain under 20 mph. Highs today will range from the 70s near the coast to the lower 90s in the valleys to around 100 in the San Joaquin Valley. Minimum RH will be in the 10-15% range across the coastal ranges away and inland from the marine layer. Overall, expect little change Sunday and Monday with perhaps a bit less marine layer coverage by Monday morning. Long range models indicate a deeper trough may bring cooler temperatures and stronger onshore flow by the middle of next week. No thunderstorms are expected after Sunday.
